

# Mobile Upload Design

Build a mobile-friendly web app where the user uploads a PDF, sends it to a mock server for signing, and then views the signed PDF on their device.

## Requirements:

### 1. PDF Upload:

- Allow the user to upload a PDF from their mobile device.

### 2. Mock Server for Signing:

- Send the PDF to a mock server that simulates signing (returns a signed version of the PDF).

### 3. View Signed PDF:

- Display the signed PDF directly on the mobile device using a PDF viewer.

### 4. Responsive Design:

- Ensure the app is fully mobile-responsive and provides a smooth experience on both phones and tablets.
